Fundamental Java Concepts in MSBTE Notes

- Introduction to Java

Java, developed by Sun Microsystems in 1995, is a high-level, object-oriented programming language. Its key features include platform independence (write once, run anywhere), automatic memory management (garbage collection), and robustness.

Features of Java:

- Simple and familiar syntax derived from C/C++
- Portable: bytecode runs on any JVM
- Secure: built-in security features
- Multithreaded: supports concurrent processing
- Dynamic: supports dynamic memory allocation

- Data Types and Variables

Java provides various data types to handle different kinds of data:

- Primitive types: byte, short, int, long, float, double, char, boolean
- Reference types: objects, arrays, classes

Variable declaration example:

```
```java
```

```
int age = 20;
```

```
char grade = 'A';
```

```
boolean isPassed = true;
```

```
```
```

- Operators and Expressions

Java operators include arithmetic (+, -, *, /), relational (==, !=, >, <, >=, <=), logical (&&, ||, !), and bitwise (&, |, ^, ~, <<, >>).

Example:

```
```java
int sum = a + b;

if (a > b && b != 0) {

// Code block

}

```
```

Control Statements and Looping Constructs

Control structures control the flow of execution.

- Conditional Statements

- if-else
- switch-case

Example:

```
```java
if (marks >= 40) {

System.out.println("Pass");

} else {

System.out.println("Fail");

}

```
```

```

### - Looping Statements

- for loop
- while loop
- do-while loop

Sample for loop:

```
```java
for (int i = 0; i
System.out.println(i);

}
```

```

## Arrays and Strings

### - Arrays

Arrays store multiple data elements of the same type.

Example:

```
```java
int[] numbers = {1, 2, 3, 4, 5};
```

```

### - Strings

Strings are objects in Java, used to handle text.

Example:

```
```java
```

```
String name = "MSBTE";
```

```
System.out.println(name.length());
```

```
```
```

## Object-Oriented Programming (OOP) in Java

OOP is at the core of Java programming, and understanding its principles is vital for MSBTE students.

- Classes and Objects
- Class: blueprint for objects
- Object: instance of a class

Example:

```
```java
```

```
class Student {
```

```
String name;
```

```
int rollNumber;
```

```
void displayDetails() {
```

```
System.out.println("Name: " + name);
```

```
System.out.println("Roll Number: " + rollNumber);
```

```
}
```

```
}
```

```
public class Main {  
  
    public static void main(String[] args) {  
  
        Student s1 = new Student();  
  
        s1.name = "Rahul";  
  
        s1.rollNumber = 101;  
  
        s1.displayDetails();  
  
    }  
  
}  
  
...
```

- Inheritance

Inheritance allows a class to acquire properties from another class.

```
```java
```

```
class Animal {

 void eat() {

 System.out.println("This animal eats food");

 }

}

class Dog extends Animal {

 void bark() {

 System.out.println("Dog barks");

 }

}
```

```
}
```

```
}
```

```
...
```

### - Polymorphism

Ability of an object to take many forms, typically through method overriding and overloading.

### - Encapsulation and Abstraction

- Encapsulation: wrapping data with methods
- Abstraction: hiding complex details

## Exception Handling in Java

To write robust programs, understanding exceptions is important.

Try-Catch Example:

```
```java

try {

int result = 10 / 0;

} catch (ArithmeticException e) {

System.out.println("Cannot divide by zero");

}

```
```

## File Handling

Java provides classes for file operations.

Reading a file:

```
```java

import java.io.File;

import java.io.FileReader;

import java.io.BufferedReader;

public class ReadFile {

    public static void main(String[] args) throws Exception {

        File file = new File("example.txt");

        BufferedReader br = new BufferedReader(new FileReader(file));

        String line;

        while ((line = br.readLine()) != null) {

            System.out.println(line);

        }

        br.close();

    }

}

```
```

## Multithreading Basics

Multithreading allows concurrent execution of threads.

Simple Thread Example:

```
```java
```

```
class MyThread extends Thread {  
  
    public void run() {  
  
        System.out.println("Thread is running");  
  
    }  
  
}  
  
public class Main {  
  
    public static void main(String[] args) {  
  
        MyThread t1 = new MyThread();  
  
        t1.start();  
  
    }  
  
}  
  
...
```
